

Justin (Juyoung) Park

Staff Software Engineer

Android OS · Framework · Connectivity · Mobile SoC

Issaquah, WA (Open to relocation) — justin jy88.park@gmail.com — +1-206-677-7198 — [linkedin.com/in/juyoung-park0](https://www.linkedin.com/in/juyoung-park0)

Summary

Staff-level software engineer with 17+ years of experience designing, building, and commercializing Android OS and core platform software for smartphones, wearables, and connected devices.

Deep expertise across the Android stack including system services, frameworks, background execution, and platform integration on ARM-based mobile SoCs. Proven technical leader with strong debugging skills, experience driving complex features from design to global rollout, and a track record of influencing architecture and technical decisions across multiple teams. Holds a Master's degree in Artificial Intelligence with applied experience in sensor-driven features.

U.S. Permanent Resident — No visa sponsorship required

Core Expertise

- **Android OS & Framework** — System services, background execution, IPC
- **Core Platform Development** — Feature design, SDK/APIs, platform integration
- **Mobile SoC & ARM Systems** — Modem interaction, performance and memory
- **Concurrency & Debugging** — Multithreading, performance tuning, issue triage
- **Commercialization & OTA** — OTA/FOTA, release engineering, field reliability

Technical Skills

- **Languages:** Java, Kotlin, C, C++, Python
- **Operating Systems:** Android, Embedded Linux
- **Android Stack:** Framework, System Services, HAL interaction, Treble concepts
- **SoC & Performance:** ARM architecture, memory management, profiling
- **Tools:** Git, CI/CD pipelines, debugging and performance tools
- **AI/ML:** TensorFlow, PyTorch, applied ML for sensor data

Professional Experience

Samsung Electronics — Mobile Division

Suwon, Korea

Lead Principal Software Engineer

Mar 2022 – Present

- Leading Android system software development for next-generation mobile and AR Glass platforms.
- Designing and maintaining core system services and platform features across multiple Android device categories.
- Driving architectural decisions and technical direction impacting framework behavior, background execution, and connectivity features.
- Collaborating closely with hardware, systems, and product teams to ensure features are production-ready and scalable.

Senior Software Engineer / Technical Lead

Mar 2014 – Feb 2022

- Technical lead for globally deployed Android services used on millions of Samsung smartphones and wearables.
- Designed and implemented OTA/FOTA and device management systems supporting reliable release and rollback.
- Developed network diagnostic and positioning services tightly integrated with the Android platform.
- Mentored engineers and led code reviews, debugging, and cross-team technical alignment.

Software Engineer

Dec 2005 – Feb 2014

- Developed system-level software for CDMA, EVDO, 3G, and LTE devices.
- Participated in commercialization of early Android and LTE smartphones.
- Implemented OTA/FOTA solutions for feature phones and smartphones.

Selected Projects

- **Android Core System Services** — Background services and platform features across multiple devices.
- **OTA / FOTA Platform** — Global update, rollback, and release infrastructure.
- **Network Diagnostic Service** — Platform-level network signal analysis and issue detection.
- **Gesture Recognition (Wearables)** — IMU-based features using applied ML techniques.

Education

University of Waterloo, Canada

Master of Engineering — Electrical and Computer Engineering

Specialization: Artificial Intelligence / Machine Learning

Hongik University, Korea

Bachelor of Engineering — Computer Science

Certifications

AWS Certified Solutions Architect – Associate
